

„VISIONS“ in handball

A) Sub-tactics – during „standard situations“

- 1) the number of free throws near of the opponent goal area is still relatively high, but we are not able to use them for creating of shooting situations – I think we have to pay more attention to it in training (but in theory too) /sometimes is good to make a step back and „revamp“ old tactical means/

B) 3-2-1 Defence

- 1) We always discuss about the depth of formation („non european“ concept etc.) or the basic tasks („Ballbezogen“, „Mannbezogen“). I find equally important to discuss about the variants of basic positioning (f.e. 2-1-3 in more variants depending on opponent players qualities)
- 2) This defence system provides more possibilities of situational (short time ongoing) transitions from one type of defence to another (f.e. 3-2-1 \Rightarrow 3-2+1)

C) 5-1 Defence

- 1) There are more possibilities how to play this defence. I find very effective variant (variants) with the „side“ positioning of the ejected defender.

D) Specific situations

- 1) „Hit“ of the last years – using goalkeeper as 7. field player – will continue to develop. Not only in the situation of overnumbering, but in the situations of number weakening too, as a help for active play. Generally we have to search the possibilities how to bring the goalkeepers more in attack (see the example of beach handball).

E) Fast break

- 1) The changing the specialists in defence seems to be already permanent part of the playing performance. There is why we have to find concepts of defending opponents fast break in the situations of changing (may be to use „libero“ already in the end of attack or...??).
- 2) See the last sentence of D-1 – it means bringing goalkeeper „in field“ during the fast break (2nd „wave“ etc.).
