

According to the "Visions in Handball" process, I will present the following details:

Indoor (for indoor coaching lecturers)

Defence

6 - 0

It could be very interesting to be presented the Scandinavian 6 - 0 system principles and some comparative studies between different nations using this during last major competitions.

5 - 1

France system treated in the smallest details and some evolution of this system starting from the first EU Ch. Edition. or any other major competitions.

3-2-1

Being a "Serbian" developed system, the I thing a comparative study between the former serbian countries and all the other country which has used this could be helpful for all coaches (strong and week points in every country strategies)

Offence

Fast break

I thing it could very opportune to be presented the Spanish way of fast break and again a comparative study to be made.

From another point of view, the evolution of fast break, even if it has been presented in a Top Coaches Seminar by Mr. Pollany (2006 Zurich , I think) if I am not wrong, but this topic has to be much more developed.

Team tactics

Comparative studies between tactics in the last 5 minutes, maybe in the last minute of the play in the finals of the latest major competitions.

Specific situations

Here we have to deal with "supra" and "infra" numerical situation, but as before, may be it could be very useful to be presented in the very special moment of the matches; the very last moments before the half break, in the latest moments of the matches, in the even score situations.

Sub-tactics

The situations when the goalkeeper is used as an extra play ground player.

GK - defence

Cooperation and task distributions

Here it has to be mentioned the very clear situations during the match, when task distributions has to respect some rules. Different throwing positions and ways to do it and the way of goalkeeper has to act 1 - 1 situations.
