

Marta Bon  
Slovenia Handball federation  
EHF Lecturer

*Few years ago we suggested some Ideas (Sibila, Bon) and in General, in my opinion, we should go on:*

## **General**

more attention on EHF handball periodical (more motivation?, motivation for writers)  
to organize one meeting of all subjects which are involved in handball and in scientifically  
work parallel - Maybe: to organize "on line" video conference for all lecturers

## **Scientific level**

- To assure certain scientific level of periodical journal.
- In Europe we have many expert periodicals which deal with theoretical and practical problems in handball. But all of them don't satisfy the basic scientific requirements: scientific board, reviews, indexes, etc. . I think that in this moment the level of scientific approach toward the problems among handball experts and scientists reached the sufficient level to build up such a periodical – under the patronage of EHF.
  - Foundation a group of scientists from different Universities and Institutes,
  - Work out the list of Universities and Institutes where the Handball is a special, separate subject;
  - Work out the list of registered scientists who deals with the problems concerning handball.

## ***Education of Referees and Delegates (seminars, internet, literature)***

## **RULES**

### **GENERAL:**

to define rules much more clearly

all fields, where objectifications is possible – f.e: team time out, passive play – do it

Team time out: batten on the official desk- which referees for stop and beginning ;

7m: automatically time break

## **- EDUCATIONAL**

educational camp with players, coaches, referees and delegates - to test new rules (and prepare interpretation)

## **- OTHER**

Mental and physiologically preparation

maybe some changes in physically preparation of the referees- to do some analyses of referees movements at the game- this can be base for physical testing (not only cooper ,” shuttle” run,...) . I ges ,LOAD: basic effort bases on intermittent run and not on continuously .

I suggest analyzing referees movements via system SAGIT.

## ***Sport Teachers (education, co-operation, motivation***

We could not organize and proceed in Handball's development, if we did not aim primarily and with particular interest to the spread of Handball in the young ages athletes through primary schools tournaments.

Federation through its institutional bodies, contributes in the above mentioned tournaments all around the E having achieved an impressive increase of r number.

## **- DEVELOPMENTAL PLANNING**

1. Physical education schools
2. Primary schools tournaments
3. Sports club tournaments (Ministry of Sports)
- 4

## **B. OFFICIAL COMPETITIONS**

1. Young ages championships men's -women's youth
  - Small boys -girls
  - Mini boys-girls
2. Finals

## **C. EDUCATION**

1. Seminars for teachers in P.E
2. Coaches' seminars for young ages

-

## **Special attention on fair play and education true sport**

### **Attractiveness of the Game (involvement of coaches and players, fair-play, rules innovations)**

-

#### **Rules - inovatios:**

After score: only one player should stand on the line in the middle of the court : Speed of the game rapidly grows up; this mean general changes in tactic and especially in physical preparation

Maybe – to use also similarities with beach handball: for example: attractive goal counts 2 points. But \_ it would be necessary to much more clearly define what attractive goal is

#### **Fair-play**

to underline meaning of the fair play in handball - on all levels- also competition on the highest level.

to clearly uncover and punish all subjects which try to win on unfair way- on all fields.

GENERAL:

It was a few times already underline, that it is nesenary to invole top coaches and top players in “project” for develops game ( first of all changes in rules, etc)
